

FERROUS SLAG QUALITY CONTROL ASSOCIATION

The objective of the Gütegemeinschaft Metallhüttenschlacken e.V. (Non-Ferrous Slag Quality Control Association) is quality assurance for non-ferrous slag. Its members – producers of non-ferrous metals and processing companies – undertake to comply with strict standards and inspections. The quality and inspection regulations of the RAL German Institute for Quality Assurance and Labelling are of key importance here.

Members that comply with these regulations label their products with the non-ferrous slag quality symbol. The new European standards on construction materials assign considerably more independent responsibility to aggregate manufacturers. Under these standards, inspections by neutral bodies are no longer required.

The members of the Non-Ferrous Slag Quality Control Association have nevertheless decided to have additional product inspections performed by neutral, recognised testing bodies. They consider this an important component of the quality assurance process.
