

## TECHNICAL ASSOCIATION FOR FERROUS SLAG

The Fachverband Eisenhüttenschlacken e.V. (Technical Association for Ferrous Slag) supports the economic interests of its members: steelworks, cement works, processing and trade companies. To this end, it identifies the technical interests of its members, consults them as regards the application options for slag, and supports them in exchanging economic and technical experience.

Questions of general importance for the construction materials industry are clarified in cooperation with the umbrella organisation for the German construction materials associations, the Bundesverband Baustoffe, Steine und Erden e.V. (Federal Association for Construction Materials, Stone and Earth). Together with this partner, the FEhS Institute and the European slag organisation, EUROSLAG, the Technical Association for Ferrous Slag also represents the interests of its members on a European level.
